****To use this chart: The weeks before Christmas are shown across the top of the chart.**

The dollar figure shown is the personal profit you can earn by holding just 1 party per week.

Figure your own party average. For example: Based on holding one party per week with a party average of \$400, if you held one \$400 party each week for the next 24 weeks, you would earn approximately \$2,400 personal profit before Christmas!

(based on 25% profit per party).
